

General Instructions for Lab Report Writing:

1. Report should be written using **A4 paper**.
2. Report must be **Handwritten**, digitally-written/typewritten copies will not be accepted.
3. Front page should have the following information:
 - Name of the course and Course code
 - Experiment No. and Name of the experiment
 - Name of the student
 - Student ID
 - Dept. and Section
 - Date of Submission
4. **Both softcopy and hardcopy** of the lab reports must be submitted:
 - Softcopies should be submitted in the google classroom under classwork tab, teachers will create assignments with convenient deadlines after completion of each lab. (Only pdf format is allowed to submit)
 - **The Hardcopies of the lab report must be submitted on the next lab.**
5. Only data that you have collected from the lab can match with the students of same lab group. **Be very careful about copying as the reports may be checked on the spot and we may call any student for a viva session while checking his/her lab report.** This may be considered as your lab evaluation.

Now for the report writing, you will generally have these sections:

1. **Objective**
2. **Theory:** Clearly and briefly summarize all the concepts covered in the lab and how the theory relates with what we are doing in this lab. (Keep this part clear and concise)
3. **Circuit Diagram**
4. **Data Collection:** Present the data collected clearly in tables. Identify which variables are taken for readings and why.
5. **Data Analysis:** Show the calculation of the data taken in laboratory and analyze them. Add the theoretical calculation also.
6. **Result:** Explain the findings of your study are elaborately with clarity. Show the results of your analysis and compare with the theoretical values. Use graphs and figures if needed. If you have used any other software for your convenience in the analysis, you can mention them.
7. **Discussion and Q&A:** Explain how the objectives are achieved based on your data analysis and result. How well does it relate with your theory. Example for what to write in discussion - What were the problems you faced in Section-2 and 3 and what strategies you used to overcome them. Were there any limitations in you study due to some unavoidable reason? Could you achieve your objective? Etc.
Finally, answer the questions given in the lab report as clearly as possible.

N.B. Write on both sides of the A4 paper. There are no extra marks in increasing the size of your lab report. But there is a percentage associated with the presentation quality of your report. Try to make your whole report as concise and straight to the point as possible. Do not write big abstracts or analysis. Save your time and keep it simple.
